Temporary measures (For Both domain name & hosting)	Permanent Measures (Best Practice) (For Both domain name & hosting)
Domain king is not a reliable hosting company for registration of domain names. They don't offer 24 hours services. They have poor customer support.	
Their hosting website where they sell all their products and services is not built with a secured framework and their website are using free Secure Sockets Layer (SSL) certificate.	
Attackers/Hackers can bypass it and steal any vital information from their websites. If their server is down, our domain name might not be reachable when accessed from the web browser.	
Qservers should be used to register all our domain names.	Both AWS and name cheap to be used to register and host all our products and services
